

Expanded-nine-day-v1 compute: 53.52 / 336 GPU-h, one 12.11 GPU-h transfer

Failed and cutoff attempts retain their GPU-h per the accounting policy; the prospective recovery_reserve -> second_backbone transfer (12.11 GPU-h, 2026-09-19, #123) is reflected in the caps. Every attempt ended before the 2026-09-21T11:55:19Z GPU cutoff; the recovery reserve keeps 11.89 GPU-h.
